## SURVEY OVERVIEW

The **Survival Game Player Preferences** survey, conducted by EggBit Games, was distributed across several gaming platforms, with targeted outreach to the ZSGO community and additional distribution through social channels. This approach ensured a diverse range of responses and provided valuable insights from a broad player base. A total of 349 players responded to the survey, contributing to a significant sample size that adds weight to the results and trends observed in survival gaming preferences.

The survey focused on gathering opinions about various gameplay aspects, from platform and playstyle choices to specific mechanics like resource gathering and survival challenges. Each response offered a unique glimpse into the players' perspectives, helping to identify both dominant trends and niche preferences.

## DATA COLLECTION

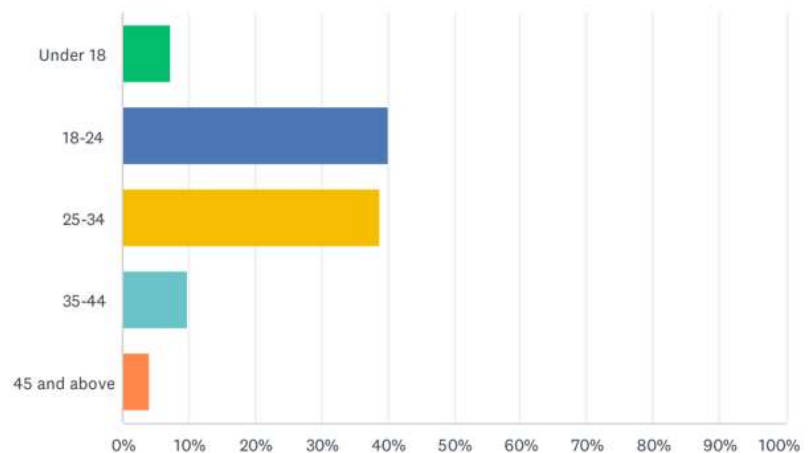

Our survey was conducted through SurveyMonkey and aimed to capture an honest reflection of player preferences in survival gaming. Participants were allowed to make multiple selections where applicable, providing a more comprehensive understanding of overlapping interests and preferences in this genre.

## PLAYER DEMOGRAPHICS

The demographic breakdown provides important context for interpreting preferences in gameplay and game design elements. The majority of respondents (40%) were aged 18-24, followed closely by the 25-34 age group at 39%. A smaller number of respondents, around 10%, fell in the 35-44 range, while only about 7% were under 18, and 4% were aged 45 and above.

Q1 What is your age?

Answered: 347 Skipped: 2

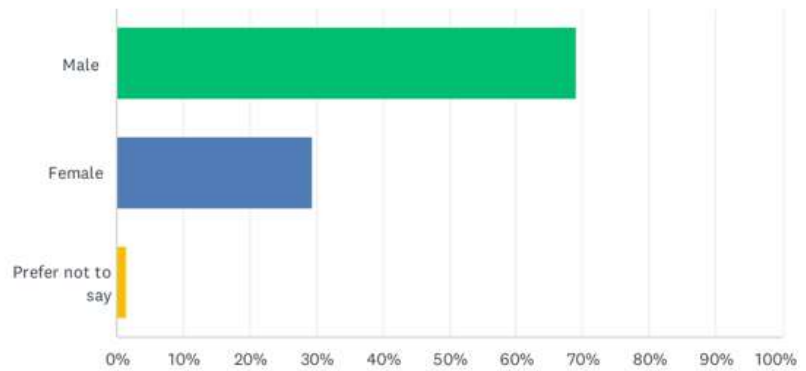

## AGE AND GENDER

The survey saw a notable gender representation, with 69% of participants identifying as male, 29% as female, and 1% preferring not to disclose their gender. While many view the gaming scene as predominantly male, it is notable that nearly 30% of the respondents identified as female, reflecting a broader appeal within survival gaming than often perceived.

## Q2 What is your gender?

Answered: 347 Skipped: 2

## GEOGRAPHIC DISTRIBUTION

Respondents hailed from various regions worldwide, with the majority located in North America and Europe. This geographic diversity adds depth to the data, as it reflects preferences that are not confined to a single region or culture, making these findings more applicable to a global player base.

## GAMEPLAY STYLES AND SETTINGS

Gameplay styles and settings were areas where player preferences showed both diversity and common trends. Please note that this question allowed multiple responses, as many players use a combination of platforms to enjoy survival games. Notably, PC emerged as the most preferred platform among respondents, chosen by 65% of participants. PlayStation and Xbox followed closely, at 39% and 37%, respectively, indicating that while PC holds a strong lead, consoles also play a significant role in survival gaming.

## GAMING PLATFORMS

Among the respondents, 65% favored PC, which aligns with the general flexibility and customization options that PC gaming offers. PlayStation and Xbox were popular among console players, each capturing around 40% of responses, with mobile gaming trailing at approximately 26%. This breakdown suggests that survival games' immersive experiences and detailed graphics may lend themselves better to PC and console platforms, where performance capabilities are typically higher.

## GAME MODES AND PLAY FREQUENCY

In terms of time commitment, players were fairly split, with 37% spending 11-20 hours per week on survival games, followed by 30% spending 6-10 hours. Another 17% reported playing 21-30 hours weekly, reflecting a high engagement level among certain player segments.

When asked about preferred game modes, 35% of respondents preferred a mix of both Player vs. Player (PvP) and Player vs. Environment (PvE) interactions, indicating a balance between competitive and cooperative play. Approximately 32% leaned towards PvE, while 33% preferred PvP-only gameplay.

## CORE SURVIVAL GAME MECHANICS

Core mechanics, including crafting, resource management, and survival challenges, were examined in depth. The data revealed that 76% of players preferred weather/environmental changes, reflecting a high interest in dynamic game worlds. Similarly, 69% of respondents preferred open-world survival games guided by set goals, while 48% favored sandbox-style gameplay.

## RESOURCE MANAGEMENT

Resource gathering is an integral part of survival games, and preferences in this area varied. Roughly 31% of players preferred fast respawn times, while 51% opted for moderate respawn times. Additionally, 59% favored games where resource gathering required a "grind" rather than quick progression, suggesting that most players appreciate a challenging and rewarding experience.

## SURVIVAL MECHANICS

Preferences for survival mechanics such as navigation aids, weather, and day-night cycles were strong. About 50% of players favored using landmarks and road signs for navigation, while 44% preferred a minimap showing their exact location. In terms of difficulty, 36% of players enjoyed hardcore survival modes, and 24% opted for easier modes.

# DESIGN AND CUSTOMIZATION PREFERENCES

Design preferences, including graphics, sound, and customization options, revealed a mix of aesthetic and functional preferences. Notably, 73% of respondents favored a realistic survival experience over an arcade-like one, and 85% stated that sound design was essential to their experience. Customization options were also popular, with 47% finding it very important.

## GRAPHICS AND IMMERSION

Realistic graphics were preferred by 37% of respondents, while 30% were indifferent, and the rest favored stylized art forms like low-poly or pixel. This split suggests that while realism enhances immersion, many players are open to a variety of graphic styles as long as the gameplay remains engaging.

## CUSTOMIZATION AND SOCIAL FEATURES

In addition to graphics, character customization was important to 44% of players, who found it very important to have control over their character's appearance. Additionally, social interaction outside of the game, such as on forums, Discord, or Reddit, was reported by 85% of players, showing that survival game communities extend well beyond the in-game experience.

## SUMMARY OF FINDINGS

Overall, the **Survival Game Player Preferences** survey reveals a player base that values immersive and challenging survival game experiences. The majority of players prefer PC and console platforms, with gameplay styles balanced between PvE and PvP. Most players enjoy dynamic survival elements, including weather changes, resource management, and realistic graphics, and consider social features like in-game chat and customization options essential. These findings provide valuable insights for developers looking to align their survival games with player expectations and ensure a deeply engaging experience.

EggBit Games is proud to share these insights with the gaming community, and we encourage developers and players alike to explore each area in greater depth. As the

survival gaming genre continues to evolve, understanding these preferences will be key to fostering player engagement and satisfaction.

## FREQUENTLY ASKED QUESTIONS

### Q: WHAT IS THE MOST POPULAR PLATFORM FOR SURVIVAL GAMES?

A: According to our survey, 65% of players prefer PC for survival games, with PlayStation and Xbox also popular choices. PC's flexibility and customization options are major factors in its popularity.

### Q: ARE SURVIVAL GAME PLAYERS MOSTLY EXPERIENCED GAMERS?

A: Yes, a large portion of respondents has been playing survival games for 3–5 years or longer. This shows that many players are dedicated fans of the genre with substantial experience.

### Q: DO PLAYERS WANT HIGH REALISM IN SURVIVAL GAMES?

A: Absolutely. Many players prefer realistic graphics, immersive sound, and dynamic environmental effects, all of which contribute to the realism that makes survival games engaging.
